Vision Technology
Approach

Our work is not only about writing code but to create great experiences for our customers.

What We Do

How We Do

Agile Development

Design Thinking

Rapid Prototyping

.Net
Angular
Java Script
Flutter

Vision App Maker

Microsoft
Dynamics
Liferay
Drupal

Portal
Mobile
Rest
API

We aggregate data, people and processes in a coherent vision.

We integrate software and innovation to build great experiences for our customers.

We encourage creativity within standardized and modern environment.

We incorporated in our internal methodologies powerful approaches like Design Thinking and Agile Prototyping.

We created a software development framework, Vision App Maker, enabling our projects team to successfully deliver great experiences for our customers.

We use modern and appropriate technologies for each component purpose: reliable back-end developed in Microsoft .NET and flexible, responsive and rich front-end based on Java Script and Angular.

Our approach is to re-use existing software components, a key factor when it comes to increasing productivity and improving the quality of software.

technology

Vision Technology
Approach

What We Do

User Experience
Achieve a great user experience by using the proper methodology and appropriate technology.

Drive Innovation and Accelerates Transformation
Reduce time to market, quickly and easy prototype and test innovative ideas.

Process Automation and Digitalization
Take control over business flows to save time and money: design, analyze and implement business processes iterative, without major impact on the technical platform.

How We Do

Methodology
Design Thinking: "non-linear, iterative process which seeks to understand users, challenge assumptions, redefine problems and create innovative solutions to prototype and test"

Agile Development: iterative process during the development phase

Technology
Vision App Maker help simulate working software much earlier in the cycle. You don't have to go through the expense of time and effort before you genuinely get to experience the software and give feedback. It also reduces the need for documentation.
